Content-Transfer-Encoding: 7bit

A new US class 1A common carrier Morse code coast station has been licensed by the FCC!

As may remembered, I suggested earlier this year that those in the US interested in preserving 500kc for commercial operation should apply for a commercial coast station license - just as we did for KSM.

Two people made applications. One of these has been granted today (9/24).

Station KDR has been licensed to James A. Dalke in Bellevue, WA. OM Dalke is a broadcast engineer who just happens to have a 5kW MF transmitter in the garage so I suspect we will be hearing the signal of KDR before too long. Jim says he as many "interesting plans" for the station.

KDR is licensed for operation on 500kc and 482kc at 5kW.

See all information on the FCC Web site at:

<http://wireless2.fcc.gov/UlsApp/ApplicationSearch/appMain.jsp?applID=4055493>

One other application is pending. Others have expressed interest in submitting applications.

In my view licensing stations like KDR is the best possible way to preserve 500kc

for true commercial operations.

VY 73,

Richard Dillman  
Chief Operator, KSM  
Standing Watch on 600m

A) In the course of cruising for equipment paperwork, I note that Ballantine (still in business!) has a manual for the 300 series AC VTVM I am amazed And the price is amazing, too, \$95!=2E

So, there must still be a bunch of the 300's in use!? Is that possible? =  
We're talking what I estimate to be late 50's technology=2E Circuit is four 6AU6's, silicon diodes in PS (RCA 36591) & germanium diodes (type S53G by Transitron)=2E I'm not familiar with either of these, must've been early=ss days=2E

I got the Ballantine paper off of the BAMA web site, thanks to some kind soul who submitted it there=2E It's a heck of a good site!

B) Thanks to steerage by Chuck McGregor, I was able to order a Krohn-Hite =5700 Func Gen ops & service manual from Ridge Equipment Co=2E (www=Eridgee=quipment=2Ecom)=2E Price was reasonable=2E In my long searches, I'd never=come across them=2E

C) And thanks to another list member, I got a hold of paper (finally) for my Hewlett-Packard 403B AC VTVM from him=2E

Hey folks, you're a whale of a good resource!

Awhile back, I wrote a little web article on lowering transmitter B+  
I called "Shockless Boatanchoring." I've managed to delete the  
article from the web space and can't find any back-up copies.  
Does anyone by chance have a saved copy of it?  
Thanks.

Gentlemen & Ladies,

I have a need for a copy of the test book for this tester or a later model  
of the TV-7. I will be happy to pay for the copy or orig.

George,

Some years ago, Antique Electronic Supply reprinted the 1962 revision and I somehow have ended up with a couple of unused extras. Settings are good for TV-7/U through TV-7D/U. Price \$17.10 plus \$2.00 shipping. The AES copies have light blue covers and are punched properly to clip in the lid of the tester.

Impressive! I have a few 300's (and wonder what to do with  
them). If I recall correctly, I have a manual and it isn't  
much. For \$95 you would think it was a HP manual.  
I'll check the BAMA site for the data.  
Jim

OK, I took it to Boatanchor get-together, had a few bites, but no takers.  
Radio is in good condition. Front panel is excellent. Includes speaker and  
original manual. \$175/offers?

Subject: Riddex device and RFI?  
Content-Type: text/plain; charset=us-ascii; format=flowed  
Content-Transfer-Encoding: 7bit

I wonder whether any BAers has had first hand experience with a RIDDEX device? Supposed to plug it in to an AC outlet and it protects from/eliminates bugs, vermin, etc., by creating 'an electric field' throughout the home on the floor in which it is plugged. The field is not described as hf, ultrasonic, etc., but rather a 'field' that is radiated throughout the house by the house wiring (which probably eliminates ultrasound.)

I saw this device (\$30 for 2) on late night TV and read several 'testimonials' that were mostly favorable-naturally; a few responded with a 'save your \$\$' and use boric acid powder....

But none addressed an RFI problem that a device such as this might create-what does it do to the ham bands, cordless phones, TV,etc?

I noted the ads go back to the early 2000s or before; further, I realize that there are very few miracle devices in this world of ours. Is this another device that does generate rfi and is permitted by FCC?

If it really is the greatest thing since sliced bread, howcum I have never heard of it before.... have you?  
Herb W5AN

No doubt this is a "gift" of deregulation. It needs no approval if the mfr. claims it comes in under the Part 15 wire (pun intended). See:

[http://en.wikipedia.org/wiki/Part\\_15\\_\(FCC\\_rules\)](http://en.wikipedia.org/wiki/Part_15_(FCC_rules))

It may be that it transmits good buddy signal checks in the citizen's band. The replies would drive the bugs out.

Hi Gang,

Can anyone point me to single LED that has a beam or spotlight output?  
I need one white light for illuminating a super 8mm movie film editor screen.

Thanks & take care,

Ken N5CM

Has anyone successfully found this program on the BBC Radio 4 "Listen Again" facility as is mentioned below?

I've searched and searched and just cannot find it at the link below in the "Listen Again" section.

thanks,  
ben

Hi Ben,

I have no idea of how long past broadcasts are available before they are deleted.
